

1.2 CSS Must Know

高级网页设计

CSS

CSS的三种用法

➤ <link>

➤ <link rel="stylesheet" href="resources/css/style.css">

➤ <style>

➤ <style> body { font-size: 14px; } </style>

➤ attribute

➤ <p style="font-size:14px;"></p>

CSS选择器

- type, class (.), id (#)
- position, group
- attribute
- pseudo element or class
- subclass

在Web Tools中查看CSS

The screenshot displays a web development tool's interface, specifically the CSS inspector. The top navigation bar includes tabs for 'Styles', 'Computed', 'Event Listeners', 'DOM Breakpoints', and 'Properties'. Below this is a 'Filter' input field with icons for adding, removing, and refreshing. The main content area shows the following CSS rules:

```
element.style {  
}  
  
body { user agent stylesheet  
  display: block;  
  margin: 8px;  
}
```

Below the code, a box model diagram is shown. It consists of three nested rectangles:

- An outermost dashed orange rectangle representing the **margin**, with a value of 8 on all sides.
- A middle solid orange rectangle representing the **border**, with a value of - on all sides.
- An innermost dashed green rectangle representing the **padding**, with a value of - on all sides.

In the center of the padding area, a blue box indicates the content dimensions: 1309 x 244.
